## Flat Screen Garage® Table

### What is the product offering?

- This system uses its own table only. It is not available on any other table.
- Single monitor lift sizes: 30X36, 30X42, 30X48, 30X54
- Double monitor lift sizes: 30X60, 30X66, 30X72
- Post-formed or urethane edges available
- Standard InTandem laminates and paints
- One PowerUp or grommet can be added to 42", 48" and 54" tables in the upper left corner; two PowerUps or grommets can be added to 66" and 72" tables in between the garage units
- Power in beams is only accessible from user side; there is no dual-beam access
- Standard door cutout size is 7-1/2" X 19-3/8". As a special, other door openings can be requested, subject to approval.

### What are some of the advantages that we will be promoting for this line?

- The keyboard and mouse stow securely and conveniently with the monitor
- There is a full work surface in front of the monitor
- Monitor movement can be stopped at any point for flexibility and safety
- Monitor articulates 15 degrees to minimize eye strain and glare

### How do I specify the tables?

Worksurfaces with garage units are specified by size. Worksurfaces 60" and over come standard with two units.

Beams are specified with or without power, and then by type (note that this system requires left, middle, and right designation of the beams). Data covers are not available.

Legs are standard C-leg regardless of location. Legs can be shared. Legs are similar to, but NOT INTERCHANGABLE with, InTandem.

One receiver is needed per table regardless of single or double unit.

At least one remote is needed per instructor. Additional remotes for backup are recommended.

Electrical components are specified separately as needed. CPU slings and security kits are also specified separately.

### Where do the CPU's go? How do they attach? Do all CPU's work with the FSG?

CPU's holders must be specified. Any of our CPU holders can be used under the table provided there is enough room, and locking CPU holders are available.

There may be fit concerns if a customer is using two wider CPU's (over 4-1/2" each) on a 30X60, but the two larger sizes--66" and 72"--should accommodate two CPU's in the center with no issues.

### Are sales samples going out?

Because of the need to provide an entire table, we will be using a limited supply of rotating sales samples. Samples are 30X36" or 30X42" single unit tables with remotes. They are crated for transit. Shipping and handling costs will be the responsibility of the sales district, and the sales district will be charged if the unit is damaged or lost. Contact Lisa Zeller at X3535 if you need a sample.

Reps may also choose to order their own sample tables and/or mock ups. These will be charged to the appropriate district's sample account. Assembled and crated tables will require a special to be written, and will incur an upcharge for assembly and shipping.

**When will the price lists be ready?**

The Flat Screen Garage Price List is published on the PKB.

**Who programs the units?**

The units are programmed at the factory.

**How are the tables assembled?**

Reference the published Assembly Instructions.

**What is the lead-time for Flat Screen Garage tables?**

Standard lead-time is 6-8 weeks.
